

FavoWeb serves as managerial and Event Reporting software for the entire Carmel Olefins manufacturing facilities.

**Carmel Olefins Ltd.** is Israel's largest producer of polymers and the sole producer of polyolefins. Carmel Olefins Ltd. is the predominant supplier of raw materials to the highly-developed plastics industry in Israel. A leading manufacturer of Polyethylene and Polypropylene, the company also exports to several countries in Europe, the Middle East and Africa. Polyethylene and Polypropylene are basic raw materials for the plastics industry, which in turn manufacture a wide array of commonly used products. The company's unwavering attention to **safety** and **environmental protection** has been acknowledged by ISO 14001 and OHSAS 18001 certifications.

This attention is manifested by Carmel Olefins adopting **FavoWeb** to provide a full safety and environment reporting solution to its different facilities. Using FavoWeb's Reporting Module for incident reporting and process management, Multi module for corrective action management, Notification module for escalation management, gives Carmel a total event management system solution. For summation perspective FavoWeb supplies Ad-Hoc reports (wizard generated list and distribution reports). Failure reporting is done by all facility employees upon noticing an event. The **Safety/ Environment** inspector is involved when the event is escalated to their level, essentially hundreds of users using FavoWeb in different plant locations.
